Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

useful for treating or preventing a NOVA purpylptices. The invention is useful for treating or preventing a NOVA sportpetities. The invention is cardiomyopathy or atherosclerosis, where the disorder is related to cell signal processing and metabolic pathway modulation in a subject, preferably human. The invention is also useful for treating metabolic disorders (e.g. Alzheimer's disease, infectious disease, neurodegenerative disorders, haematopolicit disorders and various cancers. The molecules of the invention are also useful for treating or preventing cirrhosis, pancreatitis, learning and memory defects, infertility, congenital heart of defects, ance, hair growth, pigmentation disorders, endocrine disorders, reproductive, health, conrological diseases, bone marrow transplantation, endocrine diseases, allergy and inflammation, nephrological disorders, urinary system disorders, neuropsychiatric disorders and age-related disorders. The present nucleic acid sequence represents a NOVX gene. This sequence encodes a NOVX protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention is

```
(See AAW44817), a movel member of the heregulin superfamily, that has a unique N-terminal domain not present in previously identified heregulins. Gamma-HRG is secreted by human breast cancer MDA-MB-175 cells. It leads to the formation of a constitutive active receptor complex and stimulates the growth of these cells in an autocrine manner. The mucleic acid was isolated by screening a MDA-MB-175 with a probe corresponding to the EGP-like domain and part of the N-terminal sequences of HRG-beta-3. It can be used for the recombinant production of gamma-HRG, or for in vivo or exvivo gene therapy. A claimed mucleic acid, which is complementary to the mucleic acid sequence encoding the N-terminal domain of gamma-HRG, is able to reduce production of gamma-HRG by MDA-MB-175 cells. The invention provides claimed methods for activating an BEDB receptor and for provider claimed methods for activating an BEDB receptor and for provider claimed methods for activating an BEDB receptor and for provider claimed methods for activating an BEDB receptor and for provider claimed methods for activating an BEDB receptor and for provider claimed methods for activating an BEDB receptor and for provider claimed methods for activating and BEDB receptor and for provider claimed methods for activating and provider claimed methods for activating and for activating and for provider claimed methods for activating and for provider claimed methods for activating and for activating and for provider claimed methods for activating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gamma-heregulin; gamma-HRG; human; autocrine growth factor; breast cancer; MDA-MB-175 cell; diagnosis; gene therapy; ErbB receptor; cell proliferation; cell differentiation; cell sifferentiation; neurological disorder; muscular disorder; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     enhancing proliferation, differentiation or survival of a cell by contacting the cell (preferably a glial or muscle cell) with gamma-HRG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This nucleic acid molecule codes for human gamma-heregulin (gamma-HRG)

The invention provides HRG ligands, including gamma-HRG, that have affinity for and stimulate HRR2, HRR3 and/or HER4 receptors in autophosphorylation. A new method of treating respiratory distress syndrome in humans uses HER2, HER3 and/or HER4 receptor ligands as epithelial growth factors. A novel method of inducing epithelial cell growth and/or proliferation comprises contacting a normal epithelial cell which expresses HER2, HER3 and/or HER4 receptors with an isolated ligand which activates HER2, HER3, HER4 receptors or their combination. Also claimed are methods of increasing lung surfactant protein A, or of treating chronic obstructive pulmonary disease, respiratory distress or emphysema, by administering an effective amount of an isolated HER ligand
                                                                                                                                                                                                                                                                           Gamma-heregulin; HRG-alpha; human; ligand; HER2; HER3; HER4; receptor;

The patent discloses a method for inducing hair cell generation, or inner-
ear-supporting cell growth, regeneration, and/or proliferation, by
heregulins (HRG), the ligand for HRZ2/HER3 dimeric receptors. Heregulin
contains function as activators of HBR-2 concogene and result from
alternate splicing of a single gene mapped to chromosome Bp. The two
major types, alpha and beta HRG's are based on two variant Esf-like
(epidermal growth factor) domains, that differ in their C-terminal ends.
This method can be used to increase the number of inner-ear-supporting
cells and for treatment of hair cell related hearing disorders and
clisease states associated with tissue damage, e.g. ototoxic injury,
acoustic assault, degenerative hearing loss, balance impairments, damage
associated with surgery or physical injury and inner ear disorders
cell dysfunction. The present sequence is the human
heregulin variant, gamma-HRG protein encoding cDNA, isolated from a
contained to hair cell dysfunction. The present sequence is the human
heregulin variant, gamma-HRG protein encoding cDNA, isolated from a
contained to hair cell by human MDA-MB-175 cells. It has atleast one
                                                                                                                 1533

The method is used for inducing epithelial cell (preferably lung cell) growth and/or proliferation, for increasing lung surfactant protein A and for treating respiratory distress or emphysema, for treating chronic
                                                                                                                               360
                                                                                                                                                                                                                                                                                                                                                                                                   400
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; heregulin; antiasthmatic; antiinflammatory; vulnerary; antiulcer; lung surfactant cell growth; HER2; HER3; HER4; HR6; lung cell; asthma; lung surfactant protein A; respiratory distress; emphysema; pneumonitis; chronic obstructive pulmonary disease; COPD; chronic bronchtis; ulcer; neonatal pulmonary disease; COPD; chronic bronchtis; ulcer; neonatal pulmonary disease; neonatal respiratory distress syndrome; accute lung injury; cystic fibrosis; surgical wound; resection; growth factor; smoke inhalation; gamma-HRG; ss.

cobstructive pulmonary disease (COPP) e.g. chronic bronchitis, asthma, neonatal pulmonary diseases including neonatal respiratory distress syndrome, meconium aspiration syndrome, chronic lung disease of the neonate, congenital diaphragmatic hernia and acute lung injuries conducte, congenital diaphragmatic hernia and acute lung injuries conduction, near drowning, cystic fibrosis and other epithelial cell trauma diseases including injuries associated with surgical wounds and researchions, ulcers, lesions and tissue tears as normal epithelial cell growth factors. For treating infants/neonates with respiratory distress cas well as youth and adult with poor lung function due to lung injury or danage. The HRG binds with varying and very high affinity to the HER2, HER3 and/or HER4 receptors. The method stimulates growth and collinar barriers of organs and allowing the affected tissue to develop collular barriers of organs and allowing the affected tissue to develop cormal physiological functions more quickly. Hence the method improves oxygenation and speeds of the development of a barrier to infection while treating lung cells that are damaged by inhalation of smoke resulting in complysema. It also facilitates regeneration of epithelial cells. The method human heregulin gamma-

                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is a coding sequence for a NOV protein. The NOV proteins and coding sequences are useful for treating or preventing NOV-associated disorders or in the manufacture of a medicament for treating the disorders, such as cancer, heart disease, inflammation, autoimmune disorders, allergies, blood disorders, AIDS, diabetes, obesity, asthma, IGA nephropathy, cirrhosis, arthritis, Alzheimer's disease, infections (e.g. bacterial, viral, parasitio), stroke, muscular dystrophy, epilepsy, and other wasting disorders associated with chronic diseases. NOVI is a TEN-M4 like protein and the NOVI gene is localised to chromosome 11
                                                                                                                                                                                                                                                                                                                          NOVX polypeptides and encoding polynucleotides, useful for preventing treating NOVX-associated disorders e.g. cancer, inflammation, or Alzheimer's disease, and in chromosome mapping, tissue typing or

The invention relates to an isolated polypeptide comprising CGDD1-12 (cell growth, differentiation and death), a naturally occurring amino acid sequence at least 90% identical to CGDD, a biologically active fragment or an immunogenic fragment. Also included are the fragment or an immunogenic fragment. Also included are the comprising a promoter sequence operably linked to the CGDD produclectides and promoter sequence operably linked to the CGDD produclectide or a transgenic organism comprising the recombinant polymuclectide, an anticomprising for compounds which bind to/modulate or are antibody, screening for compounds which bind to/modulate or are antiposists of CGDD or alter the expression of CGDD polymuclectide and antagonists are useful for diagnosing, treating or cGDD polymuclectide and antagonists are useful for diagnosing, treating or preventing disorders associated with aberrant expression of CGDD, particularly cell proliferative (e.g. arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, paroxysmal nocturnal haemoglobinuria, polycythaemia or vera, psoriasis, primary thromobocytopaenia or cancer), developmental disorders (e.g. Alzheimer disease, Parkinson's disease or epilepsy), reproductive disorders (e.g. infertility or a disruption in the menstrual cycle), or autoimmune/inflammatory disorders (e.g. Albs), (acquired immunodeficiency syndrome) allergies, asthma, autoimmune thyroiditis, contact dermatitis, contact dermatitis, contact dermatitis, contact dermatitis, phymometrial arteriors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                osteoarthritis, osteoporosis, pancreatitis rheumatoid arthritis, vevettis, or viral, bacterial, fungal, parasitic, protozoal or helminthic infections. They are also useful in the assessment of the effects of
renal tubular acidosis; anaemia; mental retardation; epilepsy, AIDS; neurological disorder; Alzheimer disease; Parkinson's disease; asthma; reproductive disorder; infertility, autoimmune disorder; allergy; inflammatory disorder; acquired immunodeficiency syndrome; uveitis; autoimmune thyroditis, contact dermatitis; Crohn's disease; infection; diabetes mellitus; glomerulonephritis; irritable bowel syndrome; multiple sclerosis; osteoarthritis; osteoporosis; pancreatitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Baughn MR;

It was isolated from a MDA-MB-175 human breast cancer cell library after screening with an EGF-like domain. Compared to gamma-HRG cDNA (see AAV19251), clone 20 contains a 78 base insert between codons 560 and 561, and lacks the 5' end. The truncated gamma-HRG was

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tisenes in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present DNA sequence represents a gene of the invention.
                                                                                                                                                                                                                                                                                                New polynucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tissues in which the corresponding protein is preferentially expressed.
                                                                                                                                                                                                     Wang J;

               to
be
and protozoal infections. The NOVX proteins can be used as immunogens produce antibodies and as vaccines. The NOVX nucleotide sequences may lused in chromosome mapping, identifying individuals from minute biological samples (tissue typing), and in forensic identification of biological sample. The present sequence encodes human NOV15b, which is located on chromosome 4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              571 TCAGGCGCGCCTCTCCTGCTAAGTCGGTCCAACTCAGCCCTCACNCTGACAGTACG

```

```
The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, noticopic, cardiovascular, artidiabetic, anticonvulsant, cerebroprotective, noticopic, cardiovascular, antidiabetic, antidiabetic, antidiaterinitic, virucide, immunosuppressive, antidialergic, antidiaterial, fungicide, protozoacide and antihelminthic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the mandiscure of a medicament for treating a syndrome associated with a human disease selected from NOVX-associated disorder, such as cancers of e.g. leukaemia, lymphoma, melanoma or cancer of the liver, lung, muscle, ovary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic cerebrovascular disease, Alzheimer's disease or pick's cischaemic cerebrovascular transport (e.g. cystic fibrosis, diseases), disorders (e.g. allergic reactions, autoimmune haemolypic autoimmune diseases (e.g. allergic reactions, autoimmune haemolypic and protozoal infections. The NOVX proteins can be used as immunogens to produce antibodies and as vaccines. The NOVX nucleotide sequences may be produce antibodies and as vaccines. The NOVX nucleotide sequences may be biological samples (tissue typing), and in forensic identification of a biological samples (tissue typing), and in forensic identification of a biological sample.
                                                                                                                                                                                                                                                   Wolenc AR, Vernet CAM, Eisen A, Liu X;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated polynuclectides which are differentially-regulated in breast cancer. The methods and compositions of the present invention are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer, and may be used in gene therapy or antisense therapy. They can also be used in research, drug discovery, clinical medicine and forensis medicine. Sequences given in records ACC72012-ACC72074 represent polynucleotides of the invention that are this patent and the form part of the printed specification, but was obtained in electronic format directly from NIPO at

The invention relates to FCTRX polypeptides and the polynucleotides
encoding them. The sequences of the invention are useful for the
manufacture of a medicament for diagnosing and treating disorders
associated with the FCTRX polypeptide, such as colorectal cancer,
adenomatous polyposis coli, myelogenous leukaemia, congenital neonatal
cutcommune thrombocytopenia, malignant ovarian tumours, malignant brain
tumours, breast adenocarcinoma, ovarian carcinoma, melanomas, clear
carcinoma, breast adenocarcinoma, ovarian carcinoma, melanomas, clear
carcinoma, breast adenocarcinoma, neurological disorders,
cell and granular cell carcinomas, neurological disorders,
cell and granular cell associates, nerve trauma, familial myelodysplastic
syndrome, Charcot-Marie-Tooth neuropathy, Gardner syndrome, mental health
conditions, immunological disorders, allersy and infection, asthma, lung
diseases, male and female reproductive disorders, dasherss, schistosoma mansoni
cinfection, spinocerebellar ataxia, plasmodium falciparum infection,
dronenced conneal dystrophy and lattice corneal dystrophy. This sequence
corrections corneal dystrophy and lattice corneal dystrophy. This sequence

The invention relates to human FCTRX polypeptides, FCTR1-FCTR7, and the nucleic acids encoding them. These sequences are useful for the treatment or prevention of numerous disorders including myelogenous leukaemia, carcinomas, melanomas, gliomas, astrocytomas, congenital meonatal alloimmune thrombocytopaenia, neurological disorders, neurodegenerative disorders, nerve trauma, familial myelodysplastic syndrome, chanisating dardner syndrome, familial myelodysplastic syndrome, mental health conditions, immunological disorders, allergy and infection, bronchial asthma, Avellino type cosinophilia, lung diseases, reproductive disorders, infertility, male cosinophilia, lung diseases, reproductive disorders, infertility, male disorders, panoreatic diseases such as diabetes, Schistosoma mansoni infection Spinocerebellar ataxia, plasmodium falciparum parasitaemia, corneal dystrophy-Greonouw type I, Corneal dystrophy-lattice type I and Febise Bucklers conneal dystrophy. This sequence represents DNA encoding CFCTR3b, a neurestin-like protein
